

IN THE ABSTRACT:

Please amend the Abstract, as shown in Appendix II. The abstract as amended is shown as follows:

A. The present invention relates to a preamplifier for a computer display for transmitting an analog video signal as a result of converting a digital video signal outputted from a computer by a video D/A converter circuit of a digital signal processing IC to a display, wherein the input characteristic of the preamplifier is current input to match the characteristic of current output of the video D/A converter circuit.--

ABSTRACT OF THE DISCLOSURE

The present invention relates to a preamplifier for a computer display for transmitting an analog video signal as a result of converting a digital video signal outputted from a computer by a video D/A converter circuit of a digital signal processing IC to a display, wherein the input characteristic of the preamplifier is current input to match the characteristic of current output of the video D/A converter circuit.
